NASA History Overview

The National Aeronautics and Space Administration (NASA), is responsible for unique scientific and technological achievements in human space flight, aeronautics, space science, and space applications that have had widespread impacts on our nation and the world. Forged in response to early Soviet space achievements, NASA was built on the National Advisory Committee for Aeronautics (NACA), and other government organizations, as the locus of U. S. civil aerospace research and development. When NASA opened for business on October 1, 1958, it accelerated the work already started on human and robotic space flight. NASA's first high profile program was Project Mercury, an effort to learn if humans could survive in space. This was followed by Project Gemini, which used spacecraft built for two astronauts to perfect the capabilities needed for the national objective of a human trip to the Moon by the end of the 1960s. Project Apollo achieved that objective
