

New Features Update - November 2018

V16.05 (Windows) and V16.0.5 (Macintosh)

1. MacOS Mojave now supported in Kurzweil 3000 for Mac.

2. Filter Universal Library folders by name in Kurzweil 3000 for Mac.

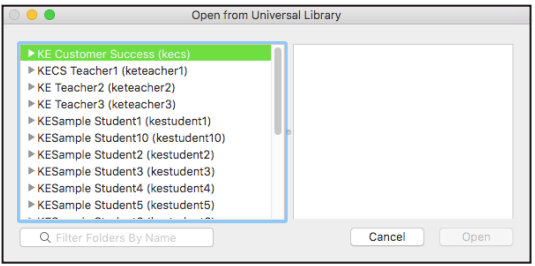

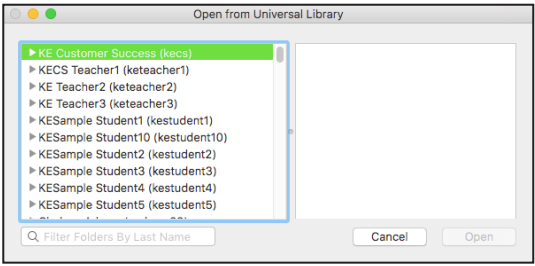

In large subscriptions, it can be time consuming to find a particular user's folder. For subscriptions with over 1,000 licenses, you can search the top level list of user folders by last name to quickly locate a student or teacher folder.

In smaller subscriptions of less than 1,000 licenses, the field filters by folder name.

- Go to the Universal Library to Open or Save a file
- Start typing the filter criteria in the **Filter folders by last name** or **Filter folders by name** field.
- The list of folders will be filtered by that criteria.

1000+ licenses

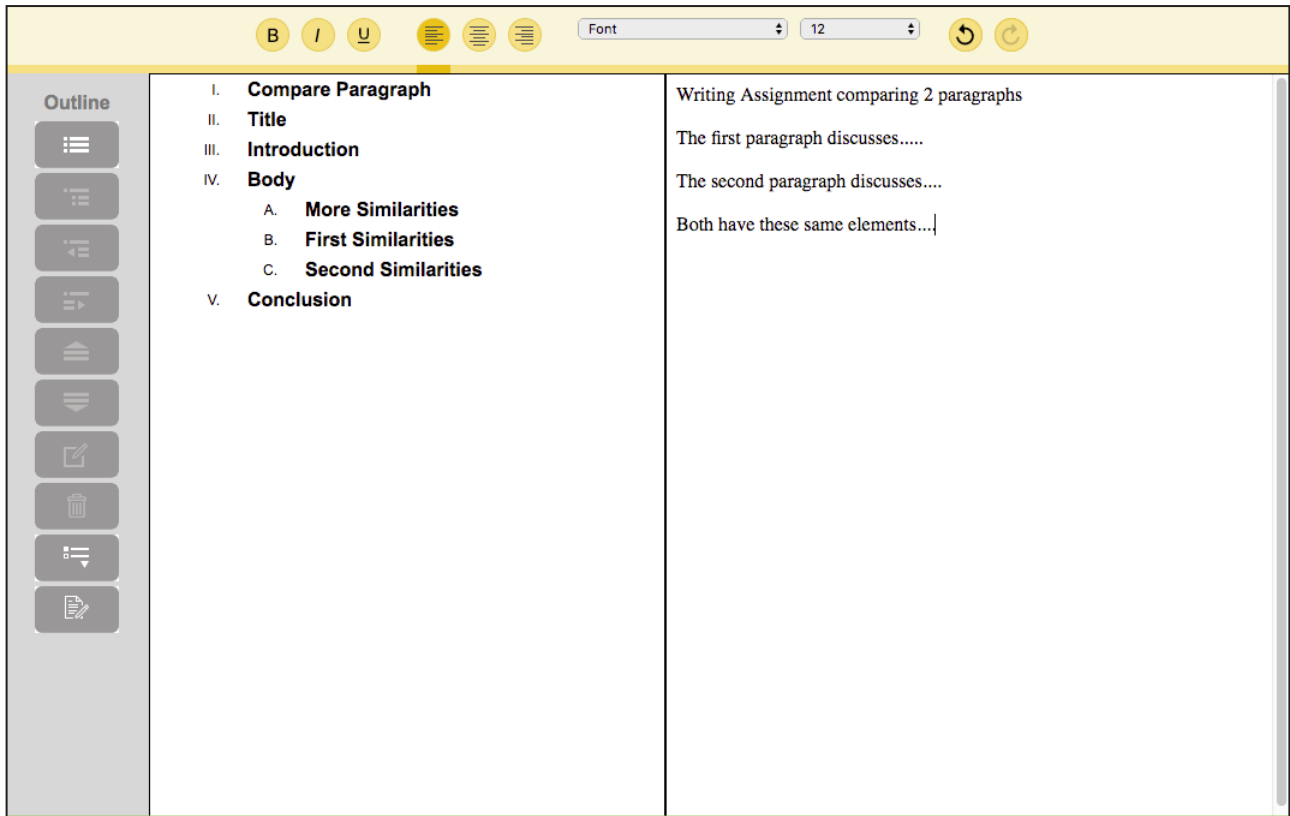

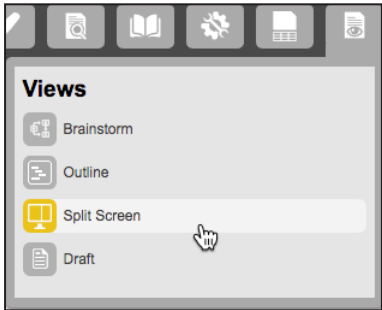

Less than 1000 licenses

3.

Split Screen view in writing path in Kurzweil 3000 for Web Browsers (Kurzweil3000.com)

Choose **Split Screen** from the **Document View dropdown** to reference your outline while typing your draft.

4.

New Test Taking Features!

Share a test with students, have them access annotations to answer questions, and collect all of their answers into a single file in Kurzweil 3000 for Web Browsers (Kurzweil3000.com)

Note: All of the steps below are done from a teacher's login.

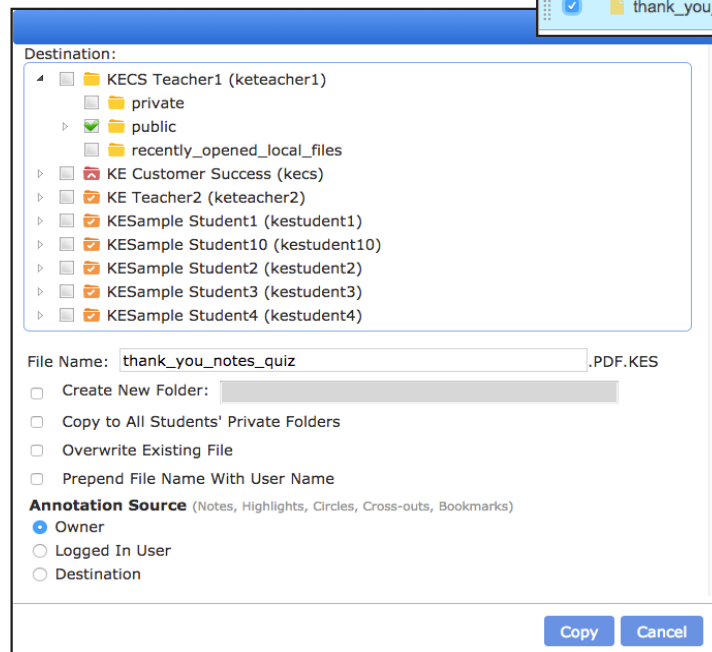

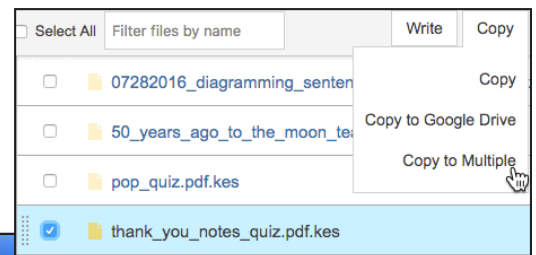

Create the Test

- Upload, open or edit an image file (test) in your Private folder.
- *Highly recommended:*
Add a document password
- Click the **Main Menu > Library** to go back to your Library

Share the file so that your annotations can be seen by students

- In your Universal Library, check the box next to the file name and choose **Copy > Copy to Multiple**
- Select your Public folder
- In **Annotation Source**, choose **Owner** to keep your annotations attached to the test
- Click Copy

The test can now be accessed by anyone in your team and they will see your annotations. Students can answer the questions and add their own annotations.

Ask students to open the test directly from your Public folder and complete the test.

Highly recommended:

After the test is completed, add or change the password to prevent further access to the file.

Collect all students' answers into one file

- Open the test and choose **Highlight menu > Extract notes and highlights**
- Click the **Advanced** button
- Click the **Users** button
- Place a check in the users whose annotations you want to extract.
- Click **OK**

The extracted file generated will display the file name, and annotations organized by user with your annotations first. Like any other extracted file, it will automatically save with “extracted_outline” appended to the name in your Recently_Opened_Local_Files folder.

The image shows two screenshots from the Kurzweil 3000 software. The left screenshot shows the 'Extract' dialog box with the 'Users' button highlighted. Below it is a smaller dialog box titled 'Extract Note and Highlights to Outline From Us...' which contains a list of users with checkboxes. The right screenshot shows the resulting extracted file outline in the Kurzweil 3000 interface, displaying the file name 'pop_quiz.pdf.kes' and the extracted content organized by user.

Extract Dialog Box:

- Notes:** Bubble Notes, Sticky Notes, Footnotes, Text Notes
- Bookmarks:** Bookmarks
- Highlights:** Yellow Highlighter, Green Highlighter, Blue Highlighter, Pink Highlighter, Orange Highlighter, Gray Highlighter, Red Circle, Blue Circle

Extract Note and Highlights to Outline From Us... Dialog Box:

Filter users by name
<input checked="" type="checkbox"/> KESample Student1 (kestudent1)
<input type="checkbox"/> KESample Student10 (kestudent10)
<input checked="" type="checkbox"/> KESample Student2 (kestudent2)
<input checked="" type="checkbox"/> KESample Student3 (kestudent3)
<input type="checkbox"/> KESample Student4 (kestudent4)
<input type="checkbox"/> KESample Student5 (kestudent5)
<input type="checkbox"/> KESample Student6 (kestudent6)
<input type="checkbox"/> KESample Student7 (kestudent7)
<input type="checkbox"/> KESample Student8 (kestudent8)
<input type="checkbox"/> KESample Student9 (kestudent9)

Extracted File Outline:
